AIGENX × DRAGONFRUIT MEDIA

Batch 3 — Role-Specific Agent Playbooks

Detailed operational playbooks for every role showing exactly how AI agents transform daily workflows — from current state through agent-assisted dream allocation.

Document: Part 1 of 2 — Producers & Production Coordinators
Prepared by: AIGENX
Date: March 2026
Classification: Confidential

Table of Contents — Part 1

Playbook 1 — Producer Agent Playbook

1.1 Role Profile & Survey Snapshot

1.2 Current vs. Dream Time Allocation (Full Breakdown)

1.3 Pipeline Steps Automated (Phase-by-Phase)

1.4 Agent Opportunity: PR-4 — Claude-to-ClickUp Agent

1.5 Agent Opportunity: PR-1 — Timeline Calculator

1.6 Agent Opportunity: PR-2 — Client Sentiment Tracker

1.7 Agent Opportunity: PR-3 — Slack Message Templates

1.8 Cross-Agent Handoffs (Producer ↔ Other Roles)

1.9 Training Plan

1.10 KPIs & Success Metrics

Playbook 2 — Production Coordinator Agent Playbook

2.1 Role Profile & Survey Snapshot

2.2 Current vs. Dream Time Allocation (Full Breakdown)

2.3 Pipeline Steps Automated (Phase-by-Phase)

2.4 Agent Opportunity: ED-2 — Capacity-Based Task Assignment

2.5 Agent Opportunity: Automated Status & Comment Routing

2.6 Agent Opportunity: YouTube Publishing Automation

2.7 Agent Opportunity: Footage Ingest Pipeline

2.8 Cross-Agent Handoffs (PC ↔ Other Roles)

2.9 Training Plan

2.10 KPIs & Success Metrics

Playbook 1 — Producer Agent Playbook

1.1 Role Profile & Survey Snapshot

Attribute	Detail
Headcount	6 Producers
Weekly Capacity	240h (5d × 8h × 6 people)
Logged Hours	244.5h (Feb 4–10, 2026) — 102% utilization
Current Client Load	4 clients
Dream Client Load	7 clients (75% increase)
Current Coordination Overhead	74.5% (ClickUp 38% + Slack 17% + Meetings 20%)
Dream Coordination Overhead	41% (ClickUp 18% + Slack 10% + Meetings 15%)
Survey Respondents	4 (5% of total)

> 📊 ***Survey Insight:*** *Producers are the only role where Claude adoption (50%) matches ChatGPT (50%). They use AI primarily for strategic planning, client research, and proofreading. Both Claude users want DFM to provide it company-wide. One producer noted: "I use ChatGPT primarily as a strategic thinking partner... managing multiple clients." Producers are the least tool-diverse group but the most strategically oriented — they need AI for decision support, not content creation.*

1.2 Current vs. Dream Time Allocation

Task Category	Current %	Dream %	Δ	Agent Impact
ClickUp Administration	38%	18%	▼ 20%	Claude-to-ClickUp MCP automates batch setup, statuses, routing
└ Task/Batch Creation	9.7%	5%	▼ 4.7%	PR-4 agent handles routine tasks with HITL review
└ General Maintenance	7.8%	8%	—	Human judgment for workflow architecture (strategic)
└ Other ClickUp	10%	5%	▼ 5%	Partially automated via agent status updates
Meetings – Internal	19.8%	15%	▼ 4.8%	Async standups + AI-generated agendas
└ Daily Standup	7.1%	4%		

			▼ 3.1%	Pre-populated async updates from ClickUp data
└ Agenda Prep	5.1%	1%	▼ 4.1%	Agent auto-generates agendas from ClickUp + Slack data
└ 1:1s	2.7%	5%	▲ 2.3%	More strategic coaching (freed time reinvested)
Slack Communication	16.7%	10%	▼ 6.7%	Slack-to-ClickUp routing automated
└ Internal	8.8%	5%	▼ 3.8%	Automated notifications replace manual pings
└ Client/External	7.9%	5%	▼ 2.9%	Templates for routine, human for strategic
Client Relationship & Strategy	—	10%	▲ NEW	Freed time → proactive client strategy, content planning
Production Strategy & QC	3.4%	12%	▲ 8.6%	More time for content quality oversight
MAKE / Automation Building	7%	5%	▼ 2%	Spearheaded by Production Strategy + Ops Specialist
Meetings – Client (External)	2.1%	5%	▲ 2.9%	More client-facing strategic time
Innovation Lab	—	10%	▲ NEW	Workflow design, experiment running
Notion / Documentation	2.5%	5%	▲ 2.5%	More documentation time

🎯 **Net Impact:** Coordination overhead drops from **74.5%** → **41%**, freeing **~34%** of capacity. At 7 clients, this means Producers gain ~17 hours/week for strategic work: Client Strategy (+14%), Creative QC (+9%), Process Improvement (+5%), Automation (+3%). Zero additional headcount required.

1.3 Pipeline Steps Automated (Phase-by-Phase)

The following maps every Producer-owned pipeline step from *DFM Current Pipeline.xlsx* to the agent that automates it.

Phase: Onboarding (12 Producer Steps)

> 📋 **Pipeline Reference:** Onboarding phase contains 12 Producer-specific steps across ClickUp, Notion, Slack, Zoom, and YouTube.

Pipeline Step	Current Tool	Agent Action	Integration
Create New Client Portal/ Calendar	Notion	PR-4 Agent creates Notion page from KO Survey data using template	MCP Notion
Fill Out New Client Portal	Notion	Agent auto-populates from KO Survey responses + contract data	MCP Notion
Create Template Client Space in ClickUp	ClickUp	PR-4 Agent creates space from template, applies client config	MCP ClickUp
Fill Out new ClickUp Space with client info	ClickUp	Agent populates all fields from KO Survey + Notion portal data	MCP ClickUp
Create Internal Slack Channel & Invite Team	Slack	Agent creates channel with naming convention, invites pod members	MCP Slack
Ask for availability	Slack	Agent sends templated availability request to pod members	MCP Slack
Schedule Intro Call	Slack, Zoom	Agent proposes time slots based on availability, creates Zoom link	MCP Slack + API Zoom
Schedule Channel Strategy Kickoff Call	Slack, Zoom	Agent schedules based on intro call + buffer, creates Zoom link	MCP Slack + API Zoom
Gain Access to YT Channel	YouTube	Agent sends access request template to client via Slack	MCP Slack
Confirm Channel Analytics received	YouTube	Agent monitors Dropbox/Slack for footage, confirms in ClickUp	MCP ClickUp + Slack
Share Style Edit to Client	Slack, Frame.io	Agent sends Frame.io link to client Slack with context message	MCP Slack + API Frame.io
Producer Updates ClickUp	Slack, ClickUp	Agent auto-updates task statuses based on Slack confirmations	MCP ClickUp + Slack

Phase: Pre-Production (15 Producer Steps)

Pipeline Step	Current Tool	Agent Action	Integration
Apply template batch to client space	ClickUp, Make	PR-4 Agent applies batch template, triggers Make subtask creation	MCP ClickUp + API Make
Customize depending on client needs	ClickUp, Notion, Slack	HITL Agent proposes customizations, Producer approves/edits	MCP ClickUp + Notion
Set publish dates	ClickUp	PR-1 Timeline Calculator computes dates, agent sets in ClickUp	MCP ClickUp
Set due dates by backtracking on publish dates	ClickUp	PR-1 auto-calculates milestone dates with buffer windows	MCP ClickUp
Ask for client availability	ClickUp, Slack	Agent sends templated availability request	MCP Slack
Cross reference team availability	ClickUp, Google Calendar, Slack	Agent queries ClickUp workload + calendar, identifies conflicts	MCP ClickUp + API GCal
Adjust schedule	ClickUp	HITL Agent proposes adjustments, Producer confirms	MCP ClickUp
Assign tasks	ClickUp, Make	ED-2 Capacity Agent recommends assignments, Producer approves	MCP ClickUp
Add creative details as available	ClickUp, Slack	Agent monitors Slack for creative updates, adds to ClickUp tasks	MCP ClickUp + Slack
Pass ideation to Client	Slack, ClickUp	Agent sends Notion link to client Slack with summary	MCP Slack
Pass script to client	Slack, Notion, ClickUp	Agent sends script link with version context to client	MCP Slack + Notion
Share feedback to scriptwriter	Slack, ClickUp	Agent routes client feedback to scriptwriter with context	MCP Slack + ClickUp
Link Voice Notes to ClickUp	ClickUp, Slack, Notta	Agent detects voice note share in Slack, links to ClickUp task	MCP ClickUp + Slack
Producer Updates ClickUp (post-script)	Slack, Notion, ClickUp	Agent auto-updates status when client approves in Slack	MCP ClickUp + Slack
Share Editing SOP to ECD	Notion	Agent sends Notion link to ECD with review request	MCP Notion + Slack

🛡️ **HITL Gates for Producers:** Schedule adjustments, client-facing communications (first send), batch customizations, and task assignments all require Producer approval. The agent proposes;

the Producer decides. Graduation path: after 30 days with <5% override rate, routine status updates auto-execute.

1.4 Agent Opportunity: PR-4 — Claude-to-ClickUp Agent

> **20%**
>
> ClickUp administration time eliminated (38% → 18%)

What It Does

An AI agent that bridges conversational instructions with ClickUp task management. A Producer says (via Slack or chat interface): *"Create a new task for Mango Pod, longform edit for [Client], due Friday, assign to [Editor]"* and the agent creates the properly configured ClickUp task with all required fields, tags, and dependencies.

Agent Architecture (OpenAI Agents SDK)

```
producer_clickup_agent = Agent(
    name="ProducerClickUpAgent",
    model="gpt-4o",
    instructions="""You are the Producer's ClickUp assistant at Dragonfruit Media.

    CONTEXT:
    - DFM manages YouTube content for multiple clients in pod structure
    - Each pod has: Producer, PC, CD, PPM, Editors
    - ClickUp hierarchy: Space (client) → List (batch) → Task (deliverable)
    - Current Make automations: subtask creation, editor database linking

    CAPABILITIES:
    - Create tasks, batches, spaces from natural language
    - Set dates, assignees, statuses, dependencies
    - Route Slack messages to ClickUp comments
    - Generate batch templates from client config

    RULES:
    - Always confirm before creating client-facing items
    - Use existing Make automations (don't duplicate)
    - Flag scheduling conflicts to Producer
    - Log all actions to #agent-audit Slack channel""",
    tools=[
        clickup_create_task,      # MCP: ClickUp
        clickup_update_task,      # MCP: ClickUp
        clickup_set_dates,        # MCP: ClickUp
        clickup_assign_user,      # MCP: ClickUp
        clickup_create_space,     # MCP: ClickUp
        slack_send_message,       # MCP: Slack
        slack_read_channel,       # MCP: Slack
        notion_read_page,         # MCP: Notion
        notion_create_page,       # MCP: Notion
    ]
)
```

ReAct Flow Example: "Set up new batch for Client X"

→ **REASON:** Producer wants a new batch. I need to: (1) check client config in Notion, (2) apply ClickUp template, (3) calculate dates using PR-1 timeline logic, (4) trigger Make subtask automation, (5) assign tasks based on ED-2 capacity data.

→ **ACT:** Call `notion_read_page(page_id="client_x_portal")` → retrieve client config (content type, frequency, review turnaround)

→ **OBSERVE:** Client X: 4 longform/month, 8 shortform/month, 48h client review window, Pod: Mango

→ **ACT:** Call `clickup_create_space(template="longform_batch", client="Client X", count=4)`

→ **OBSERVE:** Space created. 4 parent tasks generated. Make webhook triggered → subtasks auto-created.

→ **ACT:** Calculate publish dates (weekly cadence starting March 17). Backtrack: V1 due = publish - 14d, Script due = publish - 21d, Ideation due = publish - 28d.

→ **ACT:** Call `clickup_set_dates(tasks=[...], dates=[...])` for all 4 videos × all milestones

→ **OBSERVE:** All dates set. Conflict detected: Editor A has 3 concurrent V1s on March 10.

→ **HITL GATE:** "⚠️ Scheduling conflict: Editor A has 3 concurrent V1 edits on March 10. Recommend: (a) Shift Video 3 to Editor B (available), or (b) Push Video 3 V1 deadline by 2 days. Which do you prefer?"

→ **PRODUCER RESPONSE:** "Go with option A"

→ **ACT:** Call `clickup_assign_user(task="Video 3 V1", user="Editor B")`

→ **ACT:** Call `slack_send_message(channel="#mango-pod", message="📋 New batch set up for Client X...")`

→ **COMPLETE:** Batch created. 4 videos, all dates set, all editors assigned, Make automations triggered. Total time: ~2 minutes (vs. ~45 minutes manual).

Integration Map

Tool	Method	Operations
ClickUp	MCP Official Server	CRUD tasks, spaces, lists, dates, assignees, statuses, comments, dependencies
Slack	MCP Official Server	Read messages, send messages, create channels, invite users
Notion	MCP Official Server	Read client portals, create pages, update databases
Make	API Webhook	Trigger existing automations (subtask creation, editor database linking)
Google Calendar	API REST	Read availability, create events

1.5 Agent Opportunity: PR-1 — Timeline Calculator

> **4.7%**
>
> Task/Batch Creation time reduced (9.7% → 5%)

What It Does

A computational agent that accepts configurable inputs — content type (shortform/longform), number of deliverables, complexity tier, client review turnaround, and current pod capacity — and outputs a proposed schedule with milestone dates and buffer windows. Integrated directly into the PR-4 ClickUp agent as a sub-tool.

Agent Architecture

```
timeline_calculator = Agent(
    name="TimelineCalculator",
    model="gpt-4o",
    instructions="""You compute project timelines for DFM content production.

    STANDARD TIMELINES (from DFM pipeline):
    Longform: Ideation (3d) → Script V1 (3d) → CD Review (1d) →
              Client Review (2d) → Recording (3d) → Rough Cut (2d) →
              V1 Edit (5d) → PPM Review (1d) → V2 (2d) → CD Review (1d) →
              V3 (1d) → Client Review (2d) → V4 (1d) → Publish Prep (1d)

    Shortform: Clip Selection (1d) → Edit (2d) → Review (1d) →
               Revisions (1d) → Publish (1d)

    BUFFER RULES:
    - Add 1d buffer after each client review step
    - Add 2d buffer for new clients (first 3 batches)
    - Reduce buffer by 1d for clients with <24h avg review time

    CAPACITY RULES:
    - Max 2 concurrent V1 edits per editor
    - Max 3 concurrent videos per CD
    - Flag if pod utilization exceeds 85%

    OUTPUT: JSON with milestone dates, assignee recommendations,
    conflict warnings, and buffer justifications.""",
    tools=[
        clickup_get_workload,     # MCP: ClickUp
        calculate_dates,          # Function tool
        check_conflicts,          # Function tool
    ]
)
```

Input/Output Example

Input: "Calculate timeline for Client X March batch: 4 longform videos, weekly publish cadence starting March 17, client review turnaround 48h, Pod: Mango"

Output:
Video 1: Ideation Mar 3 → Script V1 Mar 5 → CD Review Mar 6 → Client Review Mar 7-8 → Recording Mar 10-12 → RC Mar 13 → V1 Mar 14-18 → PPM Mar 19 → V2 Mar 20 → CD Mar 21 → Client Mar 22-23 → Publish Mar 24
Video 2: [staggered by 7 days]
Video 3: [staggered by 14 days]
Video 4: [staggered by 21 days]

⚠️ **Conflicts:** Editor A has 3 concurrent V1s on Mar 14. Recommend splitting across Editor A + Editor B.
📊 **Pod Utilization:** 78% (within threshold)

1.6 Agent Opportunity: PR-2 — Client Sentiment Tracker

> **10%**
>
> New "Client Relationship & Strategy" allocation enabled

What It Does

A passive monitoring agent that scrapes and analyzes all client-facing communication (Slack messages, Frame.io comments) to build a running sentiment profile per client. Flags shifts in tone, emerging frustrations, and positive signals. Producers use this to preemptively address relationship risks before they escalate.

Agent Architecture

```
sentiment_tracker = Agent(
    name="ClientSentimentTracker",
    model="gpt-4o",
    instructions="""You monitor client communication sentiment for DFM.

    DATA SOURCES:
    - Slack: Client external channels (messages from client)
    - Frame.io: Review comments on video versions

    ANALYSIS:
    - Score each message: positive (0.7-1.0), neutral (0.3-0.7), negative (0-0.3)
    - Track rolling 7-day average per client
    - Detect sentiment shifts (>0.2 change in 48h = alert)
    - Categorize feedback themes: creative, timeline, communication, quality

    ALERTS:
    - 🔴 RED: Sentiment < 0.3 or sharp negative shift → immediate Slack DM to
Producer
    - 🟡 YELLOW: Sentiment 0.3-0.5 or declining trend → weekly digest flag
    - 🟢 GREEN: Sentiment > 0.7 → note for client strategy meeting

    PRIVACY: Only analyze client-facing channels. Never store raw messages.
    Store only: sentiment score, theme category, timestamp, alert level.""",
    tools=[
        slack_read_channel,       # MCP: Slack (client channels)
        frameio_get_comments,     # API: Frame.io (custom connector)
        analyze_sentiment,        # Function tool (GPT-4o)
        send_alert,               # Function tool → Slack DM
    ]
)
```

Weekly Digest Example

📊 **Client Sentiment Weekly Digest — Week of March 3, 2026**

Client A (Mango Pod): 🟢 0.82 avg (+0.05 from last week)

• 12 Slack messages, 8 Frame.io comments
• Themes: Positive on creative direction, minor timeline concern on Video 3
• Notable: "Love the new intro style!" (Frame.io, V2 review)

Client B (Dragon Pod): 🟡 0.48 avg (-0.15 from last week)
• 18 Slack messages, 14 Frame.io comments
• Themes: Recurring quality concerns on thumbnails, 3 revision requests above average
• ⚠️ Action: Schedule proactive check-in call. Thumbnail feedback pattern suggests style misalignment.

Client C (Phoenix Pod): 🟢 0.91 avg (stable)
• 6 Slack messages, 4 Frame.io comments
• Themes: Highly satisfied, minimal revisions

1.7 Agent Opportunity: PR-3 — Slack Message Templates & Automation

What It Does

A library of pre-built Slack message templates for recurring communications with auto-population of client/project-specific details. The agent can send templated messages on schedule or trigger.

Template Categories

Template	Trigger	Auto-populated Fields
Project Kickoff	New batch created in ClickUp	Client name, pod members, batch dates, deliverable count
Status Update (Internal)	Daily at 9am or on-demand	Tasks in progress, blockers, upcoming deadlines from ClickUp
Status Update (Client)	Weekly or on-demand	Completed deliverables, in-review items, next milestones
Revision Request	Frame.io feedback received	Video name, reviewer, comment count, priority level
Deadline Reminder	48h before due date	Task name, assignee, due date, dependencies
Client Check-in	Bi-weekly schedule	Recent deliverables, sentiment summary, upcoming items

1.8 Cross-Agent Handoffs (Producer ↔ Other Roles)

Handoff	Trigger	From Agent	To Agent	Data Passed
Batch → CD Ideation	Batch created, ideation task "Ready to Start"	PR-4 (Producer)	CD Agent	Client config, batch dates, content type, past performance data
Script Approved → Editor Assignment	Client approves script in Slack	PR-4 (Producer)	ED-2 (PC/ Editor)	Script link, recording ETA, editor capacity snapshot
Client Feedback → Scriptwriter	Client posts feedback in Slack	PR-4 (Producer)	Script Agent	Feedback text, script version, CD additional comments
Sentiment Alert → Producer	Client sentiment drops below threshold	PR-2 (Sentiment)	PR-4 (Producer)	Sentiment score, trend, flagged messages, recommended action
Timeline Conflict → Producer	Scheduling conflict detected	PR-1 (Timeline)	PR-4 (Producer)	Conflict details, resolution options, impact assessment
Video Approved → Publish Prep	Client approves final version	PR-4 (Producer)	PC Publishing Agent	Video link, metadata, publish date, thumbnail selection

1.9 Training Plan

> 📊 ***Training Calibration:*** *Producers already use Claude (50%) and ChatGPT (50%) for strategic planning. They're the most AI-literate management role. Training focuses on agent interaction patterns, not AI fundamentals.*

Week	Topic	Format	Outcome
1	PR-4 Agent: Natural language → ClickUp commands	Live demo + hands-on	Producers can create batches via Slack commands
1	PR-1 Timeline Calculator: Input parameters & override	Workshop	Producers can generate and adjust timelines
2	PR-2 Sentiment Tracker: Reading digests, acting on alerts	Walkthrough	Producers understand alert levels and response protocols
2	PR-3 Templates: Customizing and triggering templates	Self-paced	Producers can modify templates for their pods
3	HITL Protocols: When to approve, override, escalate	Scenario-based	Producers confident in agent governance
4	Cross-agent handoffs: Understanding the full chain	Pod simulation	Producers can trace agent actions across roles

1.10 KPIs & Success Metrics

KPI	Baseline	Target (90 days)	Measurement
ClickUp admin time	38% of capacity	18% of capacity	Time audit comparison
Batch setup time	~45 min/batch	~5 min/batch	Agent execution logs
Missed deadlines	Current baseline	Zero increase	ClickUp overdue task count
Client escalations	Current baseline	Zero increase	Sentiment tracker alerts
Client load capacity	4 clients	7 clients	Pod assignment count
Strategic time allocation	~6%	~32%	Time audit (Client Strategy + QC + Innovation)
Agent override rate	N/A	<5% after 30 days	HITL approval logs

Playbook 2 — Production Coordinator Agent Playbook

2.1 Role Profile & Survey Snapshot

Attribute	Detail
Headcount	8 Production Coordinators (includes YPCs/Publishers)
Weekly Capacity	320h (5d × 8h × 8 people)
Logged Hours	313.2h (Feb 4–10, 2026) — 98% utilization
Current Client Load	4 clients
Dream Client Load	7 clients
Current Coordination Overhead	70% (ClickUp 40% + Slack 11% + Meetings 19%)
Dream Coordination Overhead	40% (ClickUp 20% + Slack 7% + Meetings 13%)
Survey Respondents	9 (12% of total)

> 📊 ***Survey Insight:*** *PCs are the least tool-diverse group — 100% use ChatGPT, 56% Gemini, but adoption drops sharply after that. They use AI almost exclusively for communication: drafting messages, proofreading, captions, reports. One PC noted: "Anything that can cut down task time is good by me." PCs represent the* ***highest automation ROI across all roles*** *— most repetitive, rule-based work. Top request: ChatGPT Paid (4 requests).*

2.2 Current vs. Dream Time Allocation

Task Category	Current %	Dream %	Δ	Agent Impact
ClickUp Administration	39.7%	20%	▼ 19.7%	Claude-ClickUp MCP automates task creation, statuses, comment routing
└ General Maintenance	6.4%	—	▼	Automated batch creation, statuses, comments (10% total)
└ Task/Batch Creation	6.3%	—	▼	AI handles with HITL review
└ Status Updates	4.5%	—	▼	Auto-updated based on pipeline events
└ Comments	4.3%	—	▼	Routed automatically from Slack/Frame.io
└ Strategic (Client Facing Space Mgmt)	—	5%	—	Human judgment for complex setups

Meetings – Internal	18.8%	15%	▼ 3.8%	Async standups + AI agenda generation
└ Daily Standup	6.6%	4%	▼ 2.6%	Async updates from ClickUp data
└ Agenda Prep	3.3%	1%	▼ 2.3%	AI auto-generates from ClickUp
└ 1:1s	4%	5%	▲ 1%	Strategic coaching with Producers
Slack Communication	11.3%	10%	▼ 1.3%	More templatized comms
Proactive Asset Mgmt & Infrastructure	~8%	17%	▲ 9%	Freed time → Dropbox, YouTube, Footage, Notion
└ Dropbox Upload / Organization	3.5%	4%	▲ 0.5%	Better tooling
└ YouTube Publishing	3.2%	3%	—	Maintained
└ Footage Management	0.9%	5%	▲ 4.1%	Streamlined ingest
└ Notion Documentation	3.8%	5%	▲ 1.2%	SOP updates
Innovation Lab	—	10%	▲ NEW	Workflow optimization, training
Video Review / QC	1.6%	5%	▲ 3.4%	More quality oversight
Meetings – Client (External)	0.2%	3%	▲ 2.8%	More client-facing coordination
Free time (additional client allocation)	—	10%	▲ NEW	Bandwidth to take on additional clients in pod

🎯 **Net Impact:** Coordination overhead drops from **70%** → **40%**, freeing **~30%** of capacity. PCs gain bandwidth for: Asset Management (+9%), Innovation Lab (+10%), QC (+3.4%), Client Coordination (+2.8%), plus 10% free capacity for additional clients. PCs represent the **highest automation ROI across all roles**.

2.3 Pipeline Steps Automated (Phase-by-Phase)

Phase: Post-Production — QC & Routing (PC/YPC Steps)

> 📋 **Pipeline Reference:** PCs (as YPCs) own footage QC, link management, client sharing, publish prep, and publishing. These are the most automatable steps in the entire pipeline.

Pipeline Step	Current Tool	Agent Action	Integration
YPC confirms correct link and footage	Dropbox, Slack	Agent validates Dropbox link matches ClickUp task, checks file integrity	API Dropbox + MCP ClickUp
YPC updates link / places into correct space	Dropbox	Agent auto-organizes files into client/ batch folder structure	API Dropbox
YPC puts link info in task	ClickUp, Dropbox	Agent adds Dropbox link to ClickUp task custom field	MCP ClickUp + API Dropbox
YPC shares link to Client (V3 review)	Slack, ClickUp	Agent sends Frame.io review link to clien
