AIGENX × DRAGONFRUIT MEDIA

Batch 3 — Role-Specific Agent Playbooks

Part 2 of 2 — Production Coordinators (continued), Post-Production Managers, Creative Directors, and Editors

Document: Part 2 of 2
Prepared by: AIGENX
Date: March 2026
Classification: Confidential

Playbook 2 (Continued) — Production Coordinator Agent Playbook

2.4 Agent Opportunity: ED-2 — Capacity-Based Task Assignment

> **19.7%**
>
> ClickUp administration time eliminated for PCs (39.7% → 20%)

What It Does

An integration between ClickUp and editor availability data that automatically assigns incoming editing tasks to editors with available capacity. Factors in: current workload, estimated task duration, editor skill match (shortform vs. longform specialization), pod assignment, and historical performance data from the Editor Database.

Agent Architecture (OpenAI Agents SDK)

```
capacity_assignment_agent = Agent(
    name="CapacityAssignmentAgent",
    model="gpt-4o",
    instructions="""You manage editor task assignment for Dragonfruit Media.

    CONTEXT:
    - 54 editors across multiple pods
    - Editor Database tracks: specialization, avg completion time, quality score
    - ClickUp tracks: current assignments, due dates, statuses
    - Make automation already links editors to Editor Database on assignment

    ASSIGNMENT ALGORITHM:
    1. Check incoming task type (longform V1, shortform, revision, rough cut)
    2. Filter editors by: pod assignment, specialization match, availability
    3. Score candidates: capacity_score (40%) + skill_match (30%) +
       recent_quality (20%) + workload_balance (10%)
    4. Recommend top 3 candidates with rationale
    5. Present to PC for approval (HITL gate)

    CONSTRAINTS:
    - Max 2 concurrent V1 edits per editor
    - Max 1 longform + 2 shortform concurrent
    - Editors on revision cycles are deprioritized for new V1s
    - New editors (first 30 days) get max 1 concurrent task

    IDLE TIME REDUCTION:
    - Monitor for editors with no active tasks > 4 hours
    - Proactively suggest pre-assignment for upcoming tasks
    - Target: Idle time from 6.5% → 2%""",
    tools=[
        clickup_get_tasks,         # MCP: ClickUp
        clickup_get_workload,      # MCP: ClickUp
```

```
        clickup_assign_user,        # MCP: ClickUp
        editor_db_query,            # Function: Editor Database
        slack_send_message,         # MCP: Slack
        calculate_capacity_score,   # Function: scoring algorithm
    ]
)
```

ReAct Flow Example: "Assign V1 edit for Client X Video 3"

→ **REASON:** New V1 edit task ready. Need to find best available editor in Mango Pod for longform content.

→ **ACT:** Call `clickup_get_workload(pod="Mango", task_type="editing")`

→ **OBSERVE:** 8 editors in Mango Pod. Editor A: 2 active V1s (at max). Editor B: 1 V1 + 1 revision. Editor C: 0 active (idle 6h). Editor D: 1 shortform.

→ **ACT:** Call `editor_db_query(editors=["B","C","D"], specialization="longform")`

→ **OBSERVE:** Editor B: longform specialist, 4.2/5 quality, avg 4.5d completion. Editor C: generalist, 3.8/5 quality, avg 5.2d completion, new (day 22). Editor D: shortform specialist, 4.5/5 quality on shortform, 3.5/5 on longform.

→ **ACT:** Calculate scores: Editor B = 0.87 (good capacity + strong longform). Editor C = 0.62 (available but new + lower quality). Editor D = 0.54 (available but wrong specialization).

→ **HITL GATE:** "📋 Assignment recommendation for Client X Video 3 (Longform V1):
🥇 Editor B — Score: 0.87 | 1 V1 active, longform specialist, 4.2/5 quality
🥈 Editor C — Score: 0.62 | Available (idle 6h), but new hire (day 22), 3.8/5
🥉 Editor D — Score: 0.54 | Available, but shortform specialist
Recommend: Editor B. Assign?"

→ **PC RESPONSE:** "Yes, assign to Editor B"

→ **ACT:** Call `clickup_assign_user(task="Client X Video 3 V1", user="Editor B")`

→ **ACT:** Call `slack_send_message(channel="#mango-editors", message="📹 @EditorB assigned to Client X Video 3 V1. Due: March 18. Script + footage links in ClickUp task.")`

→ **COMPLETE:** Task assigned. Make automation triggered → Editor B linked in Editor Database. Total time: ~30 seconds (vs. ~15 minutes manual check + assign).

2.5 Agent Opportunity: Automated Status & Comment Routing

What It Does

Eliminates the 4.5% status update + 4.3% comment management overhead by automatically updating ClickUp task statuses based on pipeline events and routing comments between Slack, Frame.io, and ClickUp.

Status Auto-Update Rules

Pipeline Event	Detected Via	ClickUp Status Change
Client approves script in Slack	Slack message pattern match	Script → "Approved" → Recording → "Ready to Start"
Editor uploads to Frame.io	Frame.io webhook	Edit V1/V2/V3 → "In Review"
PPM leaves feedback on Frame.io	Frame.io comment webhook	Edit → "Revision Needed"
CD approves in Frame.io	Frame.io approval event	Edit → "CD Approved" → next review stage
Client approves final version	Slack/Frame.io pattern	Edit → "Final Approved" → Publish Prep → "Ready"
Publisher confirms upload	Slack confirmation message	Publish → "Scheduled"
Video goes live on YouTube	YouTube API check	Publish → "Published"

Comment Routing Rules

Source	Destination	Rule
Frame.io comment (PPM)	ClickUp task comment + Slack DM to editor	Auto-route with timestamp and severity tag
Client Slack message (feedback)	ClickUp task comment + Frame.io (if video-related)	Pattern match: "feedback", "revision", "change"
ClickUp comment (Producer)	Slack notification to relevant team member	@mention detection → DM to mentioned user
Frame.io comment (Client)	ClickUp + Slack to PC + Producer	All client Frame.io comments routed immediately

2.6 Agent Opportunity: YouTube Publishing Automation

What It Does

Automates the publish prep pipeline: downloading from Frame.io, uploading to Dropbox, adding to production tracker, pulling packaging info, uploading to YouTube, adding metadata, and scheduling.

Pipeline Steps Automated

Step	Current (Manual)	Agent Action	Integration
Download export from Frame.io	YPC manually downloads	Agent triggers download via Frame.io API on final approval	API Frame.io
Upload to Dropbox	YPC manually uploads	Agent auto-uploads to client/batch folder	API Dropbox
Add link to production tracker	YPC updates ClickUp	Agent adds Dropbox link to ClickUp custom field	MCP ClickUp
Pull packaging doc link	YPC finds in Notion	Agent retrieves from Notion packaging page	MCP Notion
Notify publisher	YPC messages in Slack	Agent sends structured message with all links	MCP Slack
Upload to YouTube	Publisher manually uploads	HITL Agent prepares upload, Publisher confirms	API YouTube
Add metadata	Publisher manually adds	Agent pre-fills from Notion packaging doc (title, description, tags)	API YouTube + MCP Notion
Schedule publish	Publisher sets date	Agent sets schedule from ClickUp publish date	API YouTube + MCP ClickUp

🛡️ **HITL Gate:** YouTube upload and scheduling require Publisher confirmation. The agent prepares everything — the Publisher reviews metadata, thumbnail selection, and schedule, then clicks "Confirm." This ensures no accidental publishes.

2.7 Agent Opportunity: Footage Ingest Pipeline

What It Does

Automates the footage receipt → validation → organization → editor notification chain. Currently, YPCs manually verify footage links, organize in Dropbox, update ClickUp, and notify editors.

→ **TRIGGER:** Client shares Dropbox link in Slack
→ **DETECT:** Agent monitors client Slack channels for Dropbox links
→ **VALIDATE:** Agent checks: file exists, correct format (MP4/MOV), file size reasonable, matches expected deliverable
→ **ORGANIZE:** Agent moves/copies to correct folder: /Clients/[Client]/[Batch]/Raw/
→ **UPDATE:** Agent adds Dropbox link to ClickUp task, updates status to "Footage Received"
→ **NOTIFY:** Agent sends Slack message to assigned editor: "📹 Footage ready for [Client] [Video]. Link in ClickUp task."
→ **LOG:** Agent logs ingest event with timestamp, file details, and validation results

2.8 Cross-Agent Handoffs (PC ↔ Other Roles)

Handoff	Trigger	From Agent	To Agent	Data Passed
Footage Received → Editor Assignment	Footage validated in Dropbox	PC Ingest Agent	ED-2 Capacity Agent	Footage link, task ID, script link, style guide ref
Editor Submits V1 → PPM Review	Frame.io upload detected	PC Status Agent	PPM QC Agent	Frame.io link, checklist reference, editor notes
Final Approval → Publish Prep	Client approves in Slack/Frame.io	PC Status Agent	PC Publishing Agent	Final video link, packaging doc, publish date, metadata
Client Feedback → Editor	Client posts in Frame.io/Slack	PC Routing Agent	Editor notification	Feedback text, timestamps, priority level
Batch Created → PC Tracking	Producer creates batch via PR-4	PR-4 Producer Agent	PC Status Agent	Batch config, task list, dates, assignees

2.9 Training Plan

📊 ***Training Calibration:*** *PCs use AI almost exclusively for writing (ChatGPT 100%). They're comfortable with AI for communication but haven't explored automation. Training focuses on understanding agent actions and HITL approval workflows — not AI tool usage.*

Week	Topic	Format	Outcome

1	ED-2 Capacity Agent: Understanding recommendations	Live demo	PCs can review and approve/ override assignments
1	Status auto-updates: What triggers what	Flowchart walkthrough	PCs understand the automation chain
2	Publishing pipeline: Review and confirm workflow	Hands-on	PCs can manage the HITL publish confirmation
2	Footage ingest: Monitoring and exception handling	Scenario-based	PCs know when to intervene manually
3	Comment routing: Understanding cross-platform sync	Self-paced	PCs can trace feedback across Slack/Frame.io/ClickUp
4	Exception handling: When agents fail or need override	Workshop	PCs confident in fallback procedures

2.10 KPIs & Success Metrics

KPI	Baseline	Target (90 days)	Measurement
ClickUp admin time	39.7%	20%	Time audit
Task assignment time	~15 min/task	~30 sec/task	Agent logs
Editor idle time	6.5%	2%	ClickUp idle tracking
Status update accuracy	Manual (error-prone)	99%+ auto-accuracy	Audit sampling
Publish prep time	~30 min/video	~3 min/video	Agent execution logs
Footage ingest time	~20 min/delivery	~1 min/delivery	Agent logs
Client load capacity	4 clients	7 clients	Pod assignment count

Playbook 3 — Post-Production Manager Agent Playbook

3.1 Role Profile & Survey Snapshot

Attribute	Detail
Headcount	5 Post-Production Managers
Weekly Capacity	200h (5d × 8h × 5 people)
Logged Hours	242.5h (Feb 4–10, 2026) — **121% utilization (overworked)**
Current Client Load	4 clients
Dream Client Load	7 clients
Key Insight	PPMs are the only role logging >100% capacity. They are the bottleneck.
Survey Respondents	4 (5% of total)

> 📊 ***Survey Insight:*** *PPMs are the audio experts — 100% use ElevenLabs (the only role with universal adoption of a non-ChatGPT tool). 75% use Runway, 50% use Claude and Kling AI. They fix audio issues editors can't resolve and are the heaviest Runway users. One PPM noted: "Using the unpaid version has worse results... GPT for managers would help." Key use cases: audio fixes, SOPs, video concepting, editor resources, script analysis. Top requests: ChatGPT Paid (3), Midjourney (2), Runway (2).*

3.2 Current vs. Dream Time Allocation

Task Category	Current %	Dream %	Δ	Agent Impact
Video Review / QC	27.9%	35%	▲ 7.1%	Higher quality V2s; catch more before CD review
Style Guides	18.8%	5%	▼ 13.8%	NEED: post-production art director for style guides
Meetings – Internal	25.2%	—	▼	Restructured into Editor Management categories
└ 1:1s	12.5%	12% (quality-focused)	—	Shift from reactive → intentional coaching
└ Daily Standup	6.4%	—	▼	Async updates replace standups
└ PPM Meeting	4.4%	4% (Pod Meetings)	—	Structured editor development

Editor Management — Intentional	~11%	30%	▲ 19%	Quality coaching, not reactive troubleshooting
└ Editor Briefings	2.9%	6%	▲ 3.1%	Increased structured project briefings
└ Performance Tracking (AI-Assisted)	—	5%	▲ NEW	AI/Editor Database flags underperformance + pattern reports
└ Peer Support / Mentoring	0.9%	3%	▲ 2.1%	Formalized support
Slack Communication	14.1%	3%	▼ 11.1%	Automated QA notifications eliminate manual pings
ClickUp Administration	5%	1%	▼ 4%	Automated via AI-assisted QA routing
Hiring	2%	5%	▲ 3%	Additional hiring resource for editorial
Onboarding	—	10%	▲ NEW	Freed admin time redirected to editor onboarding

🎯 **Net Impact:** PPMs shift from **121% utilization → sustainable 100%** while handling 7 clients. Admin overhead (Slack 14% + ClickUp 5% + reactive meetings) drops dramatically. Freed time goes to: Video QC (+7%), Editor Management (+19%), Hiring (+3%), Onboarding (+10%). The key insight: *"If PPMs spend less time in reactive 1:1s, they can spend more time on intentional editor management."*

3.3 Pipeline Steps Automated (PPM-Owned)

Pipeline Step	Current Tool	Agent Action	Integration
PPM Reviews Style Edit	Frame.io, ClickUp	ED-1 QC Agent pre-screens against style guide checklist, flags deviations	API Frame.io
PPM Shares Feedback or Revises	Frame.io, ClickUp	Agent structures feedback into categorized comments (audio, visual, pacing)	API Frame.io + MCP ClickUp
PPM reviews V1 video	Frame.io, ClickUp	ED-1 QC Agent runs automated checklist first, PPM reviews flagged items only	API Frame.io
PPM leaves V1 feedback	Frame.io, ClickUp	Agent auto-routes feedback to editor Slack + ClickUp with priority tags	MCP Slack + ClickUp
PPM reviews V2	Frame.io, ClickUp	Agent compares V2 against V1 feedback — confirms addressed items	API Frame.io
PPM confirms V2 feedback complete	ClickUp	Agent auto-updates ClickUp status, notifies CD for review	MCP ClickUp + Slack
PPM reviews V3	Frame.io, ClickUp	Agent verifies all previous feedback addressed, flags remaining	API Frame.io
PPM approves V3	ClickUp	Agent updates status, triggers CD review notification	MCP ClickUp + Slack
PPM assembles Editing SOP	Notion	Agent generates SOP draft from Style Brief + Style Edit + client config	MCP Notion

3.4 Agent Opportunity: ED-1 — Automated Video QC Checker

> **35%**
>
> Dream allocation for Video Review/QC (up from 28%) — higher quality, not more time

What It Does

Reviews a rendered video export against a client-specific checklist and produces a timestamped error report. Checks: correct intro/outro branding, lower-third accuracy, audio levels within spec, color grading consistency, required b-roll placements, caption accuracy, and export settings compliance. Flags violations with timestamps and severity ratings.

Agent Architecture

```
video_qc_agent = Agent(
    name="VideoQCAgent",
```

```
    model="gpt-4o",
    instructions="""You perform automated quality control on video exports for DFM.

    CHECKLIST CATEGORIES:
    1. BRANDING: Intro sequence present + correct, outro card present,
       lower-thirds match client style guide, watermark if required
    2. AUDIO: Levels within -14 to -6 LUFS, no clipping, music bed
       balanced, dialogue clear, no dead air > 2s
    3. VISUAL: Color grading consistent, no jump cuts unintentional,
       b-roll placements per script markers, aspect ratio correct
    4. CAPTIONS: Accuracy > 98%, timing synced, style matches brand
    5. EXPORT: Resolution matches spec (1080p/4K), frame rate correct,
       codec compliant, file size within range

    OUTPUT FORMAT:
    - Overall score: PASS / CONDITIONAL PASS / FAIL
    - Per-category score with severity (Critical/Major/Minor)
    - Timestamped issues with screenshot references
    - Comparison against previous version (if revision)

    SEVERITY RULES:
    - Critical: Wrong branding, audio clipping, wrong resolution → FAIL
    - Major: Color inconsistency, caption errors > 5 → CONDITIONAL PASS
    - Minor: Slight audio imbalance, minor timing → PASS with notes""",
    tools=[
        frameio_get_video,          # API: Frame.io
        analyze_video_frames,       # Function: CV analysis
        analyze_audio_levels,       # Function: audio analysis
        check_captions,             # Function: caption accuracy
        check_export_settings,      # Function: metadata check
        generate_qc_report,         # Function: report builder
        slack_send_message,         # MCP: Slack
        clickup_add_comment,        # MCP: ClickUp
    ]
)
```

QC Report Example

📋 **QC Report — Client X Video 3 V1**
Overall: CONDITIONAL PASS (Score: 82/100)

✅ **BRANDING (PASS):** Intro correct, outro present, lower-thirds match style guide
⚠️ **AUDIO (CONDITIONAL):**
- 02:34 — Music bed peaks at -4 LUFS (spec: -6 max) [Major]
- 05:12 — 2.3s dead air between segments [Minor]

✅ **VISUAL (PASS):** Color grading consistent, b-roll placements match script
⚠️ **CAPTIONS (CONDITIONAL):**
- 01:15 — "their" should be "there" [Minor]
- 03:42 — Caption timing 0.5s late [Minor]

✅ **EXPORT (PASS):** 1080p, 24fps, H.264, 1.2GB

Recommendation: Address audio peak at 02:34 before PPM review. Caption fixes can be batched.

3.5 Agent Opportunity: ED-5 — Frame.io Comment Sentiment Analyzer

What It Does

Monitors Frame.io review comments and produces: (1) video-level sentiment analysis summarizing reviewer satisfaction, and (2) client sentiment tracker aggregating feedback patterns over time. Runs passively, surfaces alerts when sentiment drops below threshold.

Integration with PPM Workflow

Data Point	How PPM Uses It
Video-level sentiment score	Prioritize which reviews need immediate attention vs. routine
Recurring complaint patterns	Identify systemic editor issues (e.g., "audio always flagged for Editor X")
Client satisfaction trend	Proactive escalation to Producer before client frustration builds
Editor performance correlation	Feed into Editor Database for performance tracking (dream: 5% allocation)

3.6 Agent Opportunity: AI-Assisted Editor Performance Tracking

> **5%**
>
> New "Performance Tracking (AI-Assisted)" allocation

What It Does

Aggregates data from the Editor Database, Frame.io feedback patterns, ClickUp completion times, and QC reports to generate per-editor performance dashboards. Flags underperformance patterns and generates coaching recommendations.

```
editor_performance_agent = Agent(
    name="EditorPerformanceTracker",
    model="gpt-4o",
    instructions="""You track and analyze editor performance for DFM PPMs.

    DATA SOURCES:
    - Editor Database (ClickUp): assignments, completion dates, specialization
    - Frame.io: revision count per video, feedback sentiment, QC scores
    - ClickUp: on-time delivery rate, task duration vs. estimate

    METRICS PER EDITOR:
    - On-time delivery rate (target: >90%)
    - Average revision count (target: ≤V3)
    - QC pass rate on first submission (target: >70%)
    - Client satisfaction score (from Frame.io sentiment)
    - Specialization match accuracy
```

```
    ALERTS:
    - 🔴 3+ consecutive late deliveries → immediate PPM notification
    - 🟡 QC fail rate >40% over 2 weeks → coaching recommendation
    - 🟢 Consistent high performer → recognition flag

    OUTPUT: Weekly digest per pod + individual editor scorecards
    PRIVACY: Aggregate data only. No raw feedback quotes.""",
    tools=[
        editor_db_query,            # Function: Editor Database
        frameio_get_feedback_stats,# API: Frame.io
        clickup_get_task_history,  # MCP: ClickUp
        generate_performance_report,# Function: report builder
        slack_send_message,         # MCP: Slack
    ]
)
```

3.7 Cross-Agent Handoffs (PPM ↔ Other Roles)

Handoff	Trigger	From	To	Data
Editor Submits → QC Pre-screen	Frame.io upload	PC Status Agent	ED-1 QC Agent	Video link, checklist, style guide
QC Report → PPM Review	QC complete	ED-1 QC Agent	PPM (human)	QC report, flagged timestamps, severity
PPM Approves → CD Review	PPM approval in ClickUp	PC Status Agent	CD Agent notification	Video link, PPM notes, QC report
Performance Alert → PPM	Threshold breach	Performance Agent	PPM (human)	Editor scorecard, trend data, coaching rec
Sentiment Drop → Producer	Client sentiment alert	ED-5 Sentiment Agent	PR-2 Producer Sentiment	Client ID, score, trend, flagged comments

3.8 Training Plan

> 📊 ***Training Calibration:*** *PPMs are the most technically diverse AI users — ElevenLabs (100%), Runway (75%), Claude (50%), Kling (50%). They already experiment with AI for audio fixes and video concepting. Training focuses on QC agent interpretation and performance tracking, not AI fundamentals.*

Week	Topic	Format	Outcome
1	ED-1 QC Agent: Reading reports, understanding severity levels	Live demo	PPMs can interpret QC reports and prioritize review
1	Feedback routing: How comments flow across platforms	Walkthrough	PPMs understand the Slack/Frame.io/ClickUp sync
2	Performance tracking: Reading dashboards, acting on alerts	Workshop	PPMs can use editor scorecards for coaching

2	ED-5 Sentiment: Understanding client satisfaction trends	Self-paced	PPMs can correlate sentiment with editor performance
3	SOP generation: Reviewing and refining AI-generated SOPs	Hands-on	PPMs can quality-check agent-generated SOPs
4	Advanced: Customizing QC checklists per client	Workshop	PPMs can configure client-specific QC rules

3.9 KPIs & Success Metrics

KPI	Baseline	Target (90 days)	Measurement
PPM utilization	121% (overworked)	≤100%	Time audit
Slack communication time	14.1%	3%	Time audit
ClickUp admin time	5%	1%	Time audit
QC pre-screen catch rate	N/A (manual)	>80% of issues caught before PPM	QC report vs. PPM feedback comparison
Average revision count	~V3-V4	≤V3	ClickUp task version tracking
Editor management time	~11%	30%	Time audit
Editor onboarding time	~0%	10%	Time audit

Playbook 4 — Creative Director Agent Playbook

4.1 Role Profile & Survey Snapshot

Attribute	Detail
Headcount	6 Creative Directors (includes ECD)
Weekly Capacity	240h (5d × 8h × 6 people)
Logged Hours	230.8h (Feb 4–10, 2026) — 96% utilization
Current Client Load	4 clients
Dream Client Load	7 clients
Current Preproduction %	28.9% (Ideation 10.7% + Research 9.3% + Scripting 4.8% + Thumbnails 4.1%)
Dream Preproduction %	50% (Ideation 24% + Research 14% + Scripting 12%)
Survey Respondents	5 (7% of total)

📊 ***Survey Insight:*** *CDs have a* ***knowledge gap****. All 5 use ChatGPT (100%), but adoption drops sharply: Firefly (40%), Gemini (40%), Higgsfield (20%), Claude (20%). One CD openly admitted: "I haven't sat down to learn the other tools despite knowing they're highly valuable." Training and demos would have outsized impact. Key use cases: ideation, scripting, concepting, thumbnail design, research. Top request: Higgsfield (3). The CD leadership vision: "I only want CDs working on best creative for a video and nothing else; everything else is bureaucracy."*

4.2 Current vs. Dream Time Allocation

Task Category	Current %	Dream %	Δ	Agent Impact
Preproduction — Ideation (incl. Packaging)	10.7%	24%	▲ 13.3%	Client-specific Claude projects as thought partners + thumbnail AI tools
Preproduction — Research	9.3%	14%	▲ 4.7%	AI accelerates research with YT data scraping into client dashboards
Preproduction — Scripting (incl. Roadmap)	4.8%	12%	▲ 7.2%	30% faster time-to-first-draft with AI
[Preproduction Subtotal]	**28.9%**	**50%**	**▲ 21.1%**	**Innovation Experiment target: 40-60%**

V1 Review	2.7%	0%	▼ 2.7%	PPM delivers on-brand V1. CD target = 0%
V2 Review	2.6%	5%	▲ 2.4%	CDs focus review energy on V2+
Meetings – Internal (Creative Only)	12.7%	8%	▼ 4.7%	Creative meetings only; non-creative → 0%
Meetings – Non-Creative Internal	(included above)	0%	▼ ELIMINATED	CD spreadsheet: "0"
Slack Communication	7.9%	5%	▼ 2.9%	Structured async workflows
ClickUp Administration	1.7%	0%	▼ ELIMINATED	"All tasks handled daily by production"
Post-Publication Monitoring	5.9%	0%	▼ ELIMINATED	"Reassigned for another role" — TBD hire
Training / Education	—	8%	▲ NEW	Continuous creative development & training
Pulling Shorts	3.9%	3%	▼ 0.9%	AI-assisted clip identification

🎯 **Net Impact:** Preproduction time doubles from **29% → 50%**. All bureaucracy eliminated: ClickUp (0%), non-creative meetings (0%), post-pub monitoring (0%). CDs become pure creative engines. Innovation Experiment KPIs: *"CDs report at least 30% faster time-to-first-draft"* and *"80%+ of ideation and script first drafts leverage AI assistance."* CD Toolkit: NotebookLM, Eddie AI for roughcut, Claude projects per client.

4.3 Pipeline Steps Automated (CD-Owned)

Phase: Pre-Production — Ideation & Scripting

Pipeline Step	Current Tool	Agent Action	Integration
CD ideates and creates doc in Notion	ClickUp, Notion, YouTube, ViewStats, 1of10	CD-4 Knowledge Base provides client-specific context. CD-2 feeds competitor outlier data. CD-1 scores concepts.	MCP Notion + API YouTube
Research ViewStats/1of10 for Outliers	ViewStats, 1of10	CD-2 Competitor Scraper auto-delivers weekly outlier digest	API YouTube + Custom scraper
Reviews comparable content on YouTube	YouTube, Notion	CD-2 provides curated list of comparable videos with performance data	API YouTube
CD confirms ideation complete	Notion, ClickUp	Agent updates ClickUp status when CD marks complete in Notion	MCP ClickUp + Notion
CD quickly reviews Voice Notes	Notta, ChatGPT, Slack, Notion	Agent generates voice note summary with key points for CD review	API Notta + MCP Notion
CD reviews Script V1	Slack, Notion, ClickUp	CD-1 Retention Scoring pre-analyzes script, flags drop-off risks	SDK GPT-4o analysis
CD approves or provides feedback	Slack, Notion, ClickUp	CD-5 Voice Matching ensures feedback aligns with client voice	MCP Notion + Slack

Phase: Post-Production — Reviews & Packaging

Pipeline Step	Current Tool	Agent Action	Integration
CD reviews Roadmap	ClickUp	Agent pre-checks roadmap against ideation doc for alignment	MCP ClickUp + Notion
CD reviews rough cut	Descript	Agent generates rough cut summary with key moments flagged	API Descript
CD reviews V2 on Frame.io	Frame.io, ClickUp	ED-1 QC report available alongside video. Agent highlights changes from V1.	API Frame.io
CD reviews thumbnails	ClickUp	CD-3 Packaging Roaster scores thumbnails against competitor patterns	SDK Vision analysis
CD reviews A/B test results	YouTube, ClickUp	Agent auto-pulls A/B data, compares CTR, recommends winner	API YouTube
CD reviews Monthly Report brief		Agent pre-populates brief with YT analytics, flags trends	

	Notion, YouTube, ClickUp	API YouTube + MCP Notion

4.4 Agent Opportunity: CD-1 — Predictive Retention Scoring Tool

30%

Faster time-to-first-draft (Innovation Experiment KPI)

What It Does

Accepts a full script as input and outputs a predicted audience retention curve. Identifies likely drop-off points, flags sections with low engagement potential, and suggests structural edits. Functions as an AI focus group that simulates viewer behavior before production.

Agent Architecture

```
retention_scoring_agen
```
