6. Agent-Specific ROI Rankings

Each agent maps directly to a specific time allocation reduction in the dream state. Ranked by annual value recovered:

#	Agent	Role	Hrs/ Wk	Annual $	Tier	Time Allocation Impact
1	**PR-4: Claude-to-ClickUp MCP**	Producers + PCs	14	**$21,840**	TIER 1	ClickUp Admin: Producers 38%→18%, PCs 40%→20%
2	**ED-1: Video QC Checker**	PPMs	8	**$16,640**	TIER 1	Slack 14.1%→3%, ClickUp 5%→1% (auto QA notifications)
3	**CD-2: Competitor Scraper**	CDs	5	**$13,000**	TIER 1	Research 9.3%→14% (accelerated, not reduced — more output)
4	**CD-1: Retention Scoring**	CDs	4	**$10,400**	TIER 1	Ideation 10.7%→24% (AI-augmented, higher throughput)
5	**PC Status/ Comment Router**	PCs	8	**$10,400**	TIER 1	ClickUp Comments 4.3%→0%, Status 4.5%→0%
6	**ED-4: Shortform Generator**	Editors/ PCs	6	**$7,800**	TIER 2	Pulling Shorts: CDs 3.9%→3%, 85% time reduction
7	**ED-2: Capacity Assignment**	PCs	5	**$6,500**	TIER 2	Editor Idle 6.5%→2%, Assignees automated
8	**ED-5: Sentiment Analyzer**	PPMs	3	**$6,240**	TIER 2	Editor Troubleshooting 7.6%→0% (proactive detection)
9	**PR-1: Timeline Calculator**	Producers	3	**$5,460**	TIER 2	Dates 3.9%→2.5% (auto-generated timelines)
10	**CD-3: Packaging Roaster**	CDs	2	**$5,200**	TIER 2	Thumbnail Briefs quality ↑, faster iteration
11	**PR-2: Client Sentiment**	Producers	2	**$3,640**	TIER 3	Client Slack 7.9%→5% (risk flags reduce escalations)
12	**ED-3: Rough Cut Accel.**	Editors	3	**$3,120**	TIER 3	Rough Cut 2.8%→4% (more time, higher quality)
	TOTAL	**All Roles**	**63 hrs/ wk**	**$110,240**		**Direct agent-attributable savings**

Note on Agent ROI vs. Total Capacity Recovery: The $110,240 in direct agent savings represents only **12.5%** of the total $882,778 capacity recovery. The remaining 87.5% comes from *systemic* changes enabled by the agentic infrastructure: async standups replacing

meetings, template-based communications, automated notifications, and the compounding effect of removing coordination bottlenecks across the entire pipeline.

Implementation Priority Matrix

Tier	Agents	Combined Value	Implementation Phase	Dependencies
TIER 1	PR-4, ED-1, CD-2, CD-1, PC Router	**$72,280/yr**	Phase 1 (Weeks 1–6)	ClickUp MCP, Frame.io API, YouTube API
TIER 2	ED-4, ED-2, ED-5, PR-1, CD-3	**$31,200/yr**	Phase 2 (Weeks 7–12)	Tier 1 agents operational, editor database
TIER 3	PR-2, ED-3	**$6,760/yr**	Phase 3 (Weeks 13–18)	Sentiment model trained, Descript integration

7. Tool Spend Optimization

7.1 Current Tool Spend Breakdown

$12,296	$147,555	40+	6
MONTHLY SPEND	ANNUAL SPEND	ACTIVE SUBSCRIPTIONS	INACTIVE TOOLS

Top 10 Tools by Monthly Spend

#	Tool	Monthly $	% of Total	Users	Phase	Agent Integration
1	**ClickUp**	$2,114	17.2%	104	All	MCP Server (PR-4, all agents)
2	**Notion**	$1,176	9.6%	98	All	MCP Server (CD-4 Knowledge Bases)
3	**Frame.io**	$1,095	8.9%	10	Post-Prod	REST API (ED-1 QC Checker)
4	**Google Workspace**	$932	7.6%	111	All	Calendar API (scheduling)
5	**Slack**	$866	7.0%	99	All	MCP Server (all agents gateway)
6	**Storyblocks**	$840	6.8%	2	Post-Prod	No integration (creative asset library)
7	**Dropbox**	$768	6.2%	1	All	REST API (footage ingest pipeline)
8	**Missive**	$686	5.6%	14	Pre/Post	Webhook (client email routing)
9	**Make**	$560	4.6%	1	Automation	Orchestration layer (agent triggers)
10	**Grain**	$555	4.5%	26	Pre-Prod	Partial replacement via agent summaries

Top 10 = $9,592/mo (78% of total). Remaining 30+ tools = $2,704/mo (22%).

7.2 Optimization Opportunities

Optimization	Current $/mo	New $/mo	Savings	Rationale
ChatGPT Pro → API via agents	$200	$50	**$150/mo**	Agents use OpenAI API directly; reduce seat licenses. CDs still get Claude projects.
Grain → Agent meeting summaries	$555	$200	**$355/mo**	Partial replacement. Keep for client-facing recordings; agent handles internal summaries.

Loom → Agent async updates	$144	$50	**$94/mo**	Agents generate text/Slack-based status updates. Keep Loom for complex walkthroughs.
Metricool (inactive) → Agent analytics	$59	$0	**$59/mo**	Already inactive. CD-2 Competitor Scraper + 1of10/ViewStats cover analytics needs.
Google One Storage (inactive) → Dropbox	$249	$0	**$249/mo**	Already inactive. Consolidate all storage to Dropbox Advanced.
TOTAL SAVINGS	**$1,207**	**$300**	**$907/mo**	**= $10,884/year**

7.3 New Infrastructure Costs

Item	Monthly Cost	Annual Cost	Purpose
OpenAI API (GPT-4o, Agents SDK)	$800	$9,600	Primary agent runtime — all 12 agents, function calling, orchestration
Claude API (Anthropic)	$400	$4,800	CD knowledge bases, long-context analysis, script assistance
MCP Server hosting (Railway)	$150	$1,800	3 MCP servers (ClickUp, Slack, Notion) + webhook listeners
Vector DB (Pinecone/ Weaviate)	$100	$1,200	Client knowledge bases, style guide embeddings, feedback history
Monitoring (Langfuse/ Datadog)	$200	$2,400	Agent observability, trace logging, performance dashboards
Make.com upgrade (additional ops)	$200	$2,400	5 new agent-triggered scenarios + increased operation volume
TOTAL NEW COSTS	**$1,850**	**$22,200**	

7.4 Net Tool Spend Impact

Category	Monthly	Annual
Current tool spend	$12,296	$147,555
Tool optimization savings	−$907	−$10,884
New infrastructure costs	+$1,850	+$22,200
New total tool spend	**$13,239**	**$158,871**
Net change	**+$943/mo**	**+$11,316/yr**

Cost Efficiency: A $943/month increase in tool spend enables $882,778/year in capacity recovery — a **78:1 return ratio**. The agentic infrastructure costs less than a single additional team member while unlocking capacity equivalent to 14+ FTEs.

8. Composite ROI & Financial Model

8.1 Three-Layer Value Model

#	Value Layer	Annual Value	Calculation Basis
1	**Capacity Recovery**	**$882,778**	29,372 hrs/yr freed × blended hourly rates per role (Producers $35, PCs $25, PPMs $40, CDs $50, Editors $20)
2	**Revenue Scaling**	**$540,000**	3 additional clients per pod × $15,000/client/month × 12 months (conservative estimate)
3	**Tool Spend Savings**	**$10,884**	Optimization of ChatGPT, Grain, Loom, inactive tools
	GROSS ANNUAL VALUE	**$1,433,662**	

8.2 Cost Structure

#	Cost Category	Annual Cost	Details
1	New infrastructure (tools/ APIs)	$22,200	OpenAI API, Claude API, MCP hosting, Vector DB, monitoring, Make upgrade
2	Implementation labor (one-time)	$75,000–$120,000	18-week build across 3 phases (see Batch 6 for detailed breakdown)
3	Ongoing maintenance	$24,000–$36,000	Monthly retainer for monitoring, iteration, new agent development
	TOTAL YEAR 1 COST	**$121,200–$178,200**	**Implementation + infrastructure + maintenance**
	TOTAL YEAR 2+ COST	**$46,200–$58,200**	**Infrastructure + maintenance only**

8.3 Net ROI Summary

$1.43M
GROSS ANNUAL VALUE

$178K
YEAR 1 COST (MAX)

8:1
YEAR 1 ROI RATIO

25:1
YEAR 2+ ROI RATIO

Payback Period: At the conservative end ($882,778 capacity value only, excluding revenue scaling), the implementation investment pays for itself in **7–10 weeks** of operation. Includin revenue scaling from 3 additional clients, the payback period drops to **4–6 weeks**.

8.4 Sensitivity Analysis

Scenario	Capacity Recovery	Revenue Scaling	Year 1 Net	Year
Conservative (50% of dream)	$441,389	$270,000 (1.5 clients)	+$544,073	+$66
Base Case (75% of dream)	$662,084	$405,000 (2.25 clients)	+$899,768	+ $1,0
Optimistic (100% of dream)	$882,778	$540,000 (3 clients)	+ $1,255,462	+ $1,3
Pessimistic (25% of dream)	$220,695	$135,000 (0.75 clients)	+$188,379	+$30

Even at 25% achievement of dream allocations, the projec net positive in Year 1. This is because the coordination overh is so high (74.5% for Producers, 70% for PCs) that even mod automation yields significant returns.

9. KPI Framework & Success Metrics

9.1 Primary KPIs (Evaluation Criteria Alignmen

Mapped to the brief's evaluation criteria (30% Specificity, 25
Architecture, 20% Roadmap, 15% Cost, 10% Engagement)

KPI	Baseline	30-Day Target	90-Day Target	EOY Target	Measu Metho
Coordination Overhead %	74.5% (Prod)	65%	55%	41%	Weekly audit sampli (ClickU trackin
Clients Per Pod	~4	4	5	7	Active count i ClickU
PPM Utilization	121.2%	115%	105%	100%	Logge hours / capaci hours
Missed Deadlines	Current baseline	≤ baseline	≤ baseline	≤ baseline	ClickU overdu count (increas succes
Client Escalations	Current baseline	≤ baseline	−10%	−25%	Slack escalat channe messa count
Editor Idle Time	6.5%	5%	3.5%	2%	Time a waiting assign footage feedba
V1 Editing Time %	28.3%	30%	38%	45%	Editor audit: V editing of capa
CD Preproduction %	28.9%	32%	40%	50%	CD tim audit: ideatio

			researc scriptin

9.2 Agent-Specific KPIs

Agent	KPI	Target	Measurement
PR-4: Claude-to-ClickUp	Tasks auto-created accurately	≥95% accuracy (HITL approval rate)	Approved vs. rejected in rev channel
ED-1: Video QC Checker	Technical issues caught pre-PPM	≥80% of technical issues flagged	QC report vs. found issues
ED-2: Capacity Assignment	Editor workload variance	≤15% variance across editors	Standard devi of weekly hou editor
CD-1: Retention Scoring	Prediction accuracy	≥70% correlation with actual retention	Predicted vs. 30-day retenti curves
CD-2: Competitor Scraper	Research time reduction	50% faster trend identification	Time from req insight deliver
ED-4: Shortform Generator	Shorts production time	85% reduction per short	Time from lon publish to sho ready
ED-5: Sentiment Analyzer	Proactive issue detection	≥60% of editor issues flagged before escalation	Agent flags vs reactive troubleshootin incidents

9.3 Innovation Experiment KPIs (from DFM Bri

These KPIs are explicitly defined in DFM's own documentatio

- **"Zero increase in missed deadlines or client escalations vs. control pod"** — PR-4, all agents
- **"CDs report at least 30% faster time-to-first-draft us AI toolkit"** — CD agents + AI tools
- **"80%+ of ideation and script first drafts leverage AI assistance"** — CD adoption metric
- **"Deploy AI-assisted automation layer (Claude to ClickUp MCP) for routine task creation, batch setup status updates, Slack-to-ClickUp routing"** — PR-4 scope definition

10. Risk-Adjusted Projections

10.1 Adoption Risk by Role

Role	AI Readiness (Survey)	Adoption Risk	Mitigation	Adju Rec
Producers	High (active Make users, automation-minded)	LOW	Already building automations; agents extend existing workflows	90% drea $16
Prod. Coordinators	High (most repetitive work, eager for relief)	LOW	Highest pain point; agents solve immediate daily frustrations	90% drea $14
PPMs	Medium-High (overloaded, motivated but time-constrained)	MEDIUM	Phased rollout; ED-1 QC Checker delivers immediate visible value	75% drea $15
Creative Directors	Medium (knowledge gap identified in survey)	MEDIUM	Dedicated training; Claude projects per client as entry point	70% drea $94
Editors	High (power users, 54-person team, diverse AI adoption)	LOW	Agents handle logistics, not creative work; minimal behavior change	85% drea $16
TOTAL				**$72 yr (full drea**

10.2 Technical Risk Factors

Risk	Probability	Impact	Mitigation	Financia Impact

ClickUp API rate limits	Medium	High	Request queuing, batch operations, caching layer	2-week d on PR-4 $840)
Frame.io API changes	Low	Medium	Abstraction layer; webhook fallback	1-week d on ED-1 $320)
LLM cost spikes	Low	Medium	Budget caps, model fallback (GPT-4o → GPT-4o-mini), caching	+$200-4 worst ca
Agent hallucination in ClickUp	Medium	High	HITL gates on all write operations; sandbox testing	Containe design (auto-exe
Team resistance to async standups	Medium	Low	Hybrid model first; gradual transition; leadership buy-in	−$15K if meetings reduce
MCP server instability	Low	High	Health checks, auto-restart, fallback to direct API	Minimal (graceful degrada

10.3 Phased Value Realization Timeline

Phase	Weeks	Agents Deployed	Cumulative Value/Month	Cumul % of D
Phase 1: Foundation	1–6	PR-4, PC Router, ED-1, CD-2, CD-1	$6,023/mo	~8%
Phase 2: Expansion	7–12	+ ED-4, ED-2, ED-5, PR-1, CD-3	$8,623/mo	~14%
Phase 3: Optimization	13–18	+ PR-2, ED-3, async standups, full pipeline	$9,187/mo	~15%
Phase 4: Maturity	19–26	Full adoption, HITL graduation, 5th client onboarded	$36,750/mo	~50%
Phase 5: Scale	27–52		$73,565/mo	100%

				6th–7th clients, cross-agent optimization

Key Insight: The majority of value (85%) is realized in Phase 5, *after* the agents are built and adopted. Phases 1–3 are abo building the infrastructure and proving the model. This is why Innovation Experiment approach (test with one pod, measure, then scale) is the right strategy — it de-risks the investment w building organizational confidence.

Summary: The Case for Agentic Infrastructure

$883K	$540K	78:1	29,3
CAPACITY RECOVERED/ YR	REVENUE POTENTIAL/YR	TOOL SPEND ROI	HOURS F YEA

What DFM Gets	What It Costs
• 74.5% → 41% Producer overhead (33.5% freed) • 70% → 40% PC overhead (30% freed) • 121% → 100% PPM utilization (burnout eliminated) • 29% → 50% CD preproduction time • 66% → 79% Editor core editing time • 4 → 7 clients per pod (75% scaling) • 12 purpose-built AI agents • 3 MCP servers + 12 API integrations • Full HITL governance framework • Comprehensive observability & monitoring	• $943/mo net tool spend increase • $75K–$120K implementa (one-time) • $24K–$36K/yr ongoing maintenance • 18-week phased implementation • Training investment per r (survey-calibrated) • **Total Year 1: $121K–$17** • **Total Year 2+: $46K–$58**

Final Verdict: Even at the most pessimistic scenario (25% of dream allocations achieved), the project generates a positive in Year 1. At the risk-adjusted base case (82% achievement), net annual benefit is **$726,110** — a 4:1 return on Year 1 investment and a 12:1 return on Year 2+ costs. The question i whether to invest in agentic infrastructure — it's how fast DFM can deploy it.

All figures derived from DFM's Feb 4–10, 2026 time audit, tool stack inv AI survey (73 respondents), and dream allocation targets.
Hourly rates are estimated for capacity valuation purposes. Actual fina impact depends on revenue per client and team compensation struc
